

# EWM Services

At enVista, our deep systems integration knowledge and expertise enable us to provide real-world solutions that work on time and within budget.

## Make the Most of Your SAP Investment

Our team has a proven record of tailoring systems and applying solutions that address our clients' specific business requirements, thereby reducing modifications and overall costs.

SAP Extended Warehouse Management (EWM) is a complete solution to handle all warehouse processes efficiently and easily, resulting in better management of inventory and warehouse resources and improved warehouse productivity.

Our SAP configuration team is highly efficient, experienced and knowledgeable in the EWM product and implementation best practices, which ensures your implementation is effective and helps you get the most out of your investment.

## Benefits of EWM

With a successful EWM implementation by enVista, you will:

- **Improve your operations and increase throughput.** We design the system, make operational changes, and implement technology to increase warehouse efficiency and throughput. We ensure technology is being used to its fullest capabilities for maximum efficiency and throughput.
- **Match system functionality to operational needs.** enVista's team will review your current systems to see if adjustments to configuration, implementation or integration can provide functionality in line with your needs. We evaluate technology to deliver functionality that meets your needs now and in the future.

- **Improve customer service.** We review operations and technology used to service the customer across all channels. Then, we make changes to the setup of EWM and associated systems to improve customer service.

## Our Approach

enVista's approach to EWM implementations ensures faster delivery of the solution by deploying internal accelerators and implementation scripts. Our team begins by identifying operational requirements as they pertain to the overall business strategy. We then map out an effective and seamless implementation plan. Finally, we ensure an efficient operation and a well-trained user team capable of leveraging the new technology.

The core of our implementation success is our proven **enABLE** methodology, which consists of four key phases of implementation:

**Assess:** We objectively evaluate your operational requirements to determine how to resolve business challenges and gaps.

**Build:** Along with you, we execute upon the system design through a combination of technical development and best-in-class operational process changes.

**Learn:** We place a great deal of importance on training and application testing. Our methodology is designed to effectively transition knowledge to the client team through mentoring and guidance.

**Execute:** We execute on the project plan and begin using the solution in a live environment. Post implementation support addresses any system challenges, stabilizing the workforce and ramping the operation to standard throughput levels.

## Program Management

enVista ensures not only a successful system implementation but also a successful solution delivered on time and on budget.

Throughout the implementation, project status is communicated across all levels of the organization to avoid any missteps in project direction. Major deliverables include bi-weekly project status reports, monthly executive update presentations, and bi-weekly project budget/timeline reports.

Our proven methodology ensures a complete and successful solution to our clients. We give you more than a thriving system – we are a partner whose expertise and operational standards for excellence offer confidence in knowing that not only will your project goals and objectives be met, but the successful outcome will benefit your entire enterprise.

## Results of Partnering with enVista

Our SAP EWM team will help you achieve:

- Ongoing labor cost reductions
- Increased warehouse productivity
- Reduced transportation costs
- Increased order to cash processing speed
- Increased real-time visibility to daily workload

**Consulting and solutions delivery is in our DNA.  
Let's have a conversation.™**
