

End-to-End Supply Chain Assessment

enVista's assessment is proven to streamline and improve the customer experience, foster a customer-centric supply chain model while creating a flexible and resilient supply chain to meet the unique needs of each client.

Supply chains are comprised of several moving parts, all working together to create an efficient and profitable operation. Just like a chain with a weak link, one process or functional area not working properly will cause disruption in the entire supply chain. enVista's end-to-end supply chain assessment is designed to evaluate every part of the client's supply chain and operating model to determine what is hindering maximum efficiency and profitability for the business and maximum satisfaction for the customer.

Assessment Types

Assessment Type	Diagnostic Assessment	Full Assessment
Timeframe	2 to 8 weeks	8+ weeks
Characteristics	<ul style="list-style-type: none">• Higher-level• Less data-driven• Mainly qualitative and observation-focused research• Opportunity-focused• Lower analysis cost	<ul style="list-style-type: none">• Significantly data-driven• Both qualitative and quantitative research• Deeper analysis• Higher analysis cost, but maximum, more rapid return on investment (ROI)

Why Leverage a Supply Chain Assessment?

Supply chain operations are the crux of a successful organization. Often, it can be difficult for organizational leaders to determine if their supply chain is operating at its best, and if not, to understand why not, and what areas could be improved. This is where enVista comes in. Our consultants have decades of industry experience, and have been in the shoes of supply chain leaders. We understand what keeps them up at night, and we have the analytical skills to determine the best solution for each unique challenge.

End-to-end supply chain assessments are valuable to identify and address various supply chain challenges. If the supply chain is experiencing large-scale service or cost challenges, but there is not a clear understanding of the source, enVista's team can determine not only the source of those challenges but identify the root cause of the issues, rather than just the symptoms. We can then identify solutions and collaborate with the supply chain team to deliver the appropriate solution.

Significant sales growth can also often put a strain on a supply chain that is not operationally prepared for the increased volumes and complexity. enVista's end-to-end supply chain assessment will identify the processes, organizational structure and technology needed to accommodate the appropriate requirements to service customers with maximum efficiency and ROI.

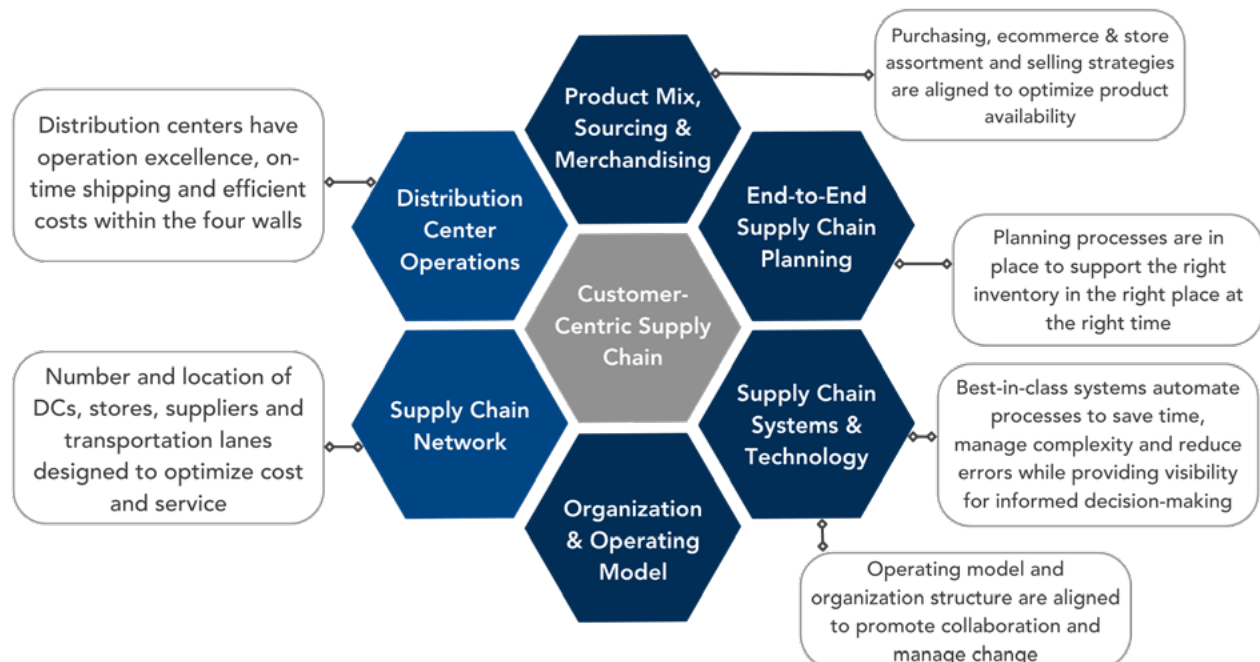

Benefits of an End-to-End Supply Chain Assessment?

In addition to addressing the above challenges, there are several other benefits to leveraging enVista's end-to-end supply chain assessment. enVista's assessment is proven to streamline and improve the customer experience, foster a customer-centric supply chain model and provide flexibility to the unique needs of each client. Supply chain leaders will have access to some of the most experienced industry practitioners, who have deep knowledge on what drives success, insight into the specific roles and challenges your team may experience and who can provide data-driven and realistic solutions.

Six Pillar Model for a Customer-Centric Supply Chain

Physical Network

Planning & Systems

Methodology

enVista's end-to-end supply chain assessment follows a trusted methodology, which involves three distinct phases: Assessment, Analysis and Recommendations, and Prioritization and Roadmap.

Assessment

During the assessment phase of enVista's end-to-end supply chain assessment, our team of consultants takes a deep dive into the organization to understand organizational structures, organizational readiness for the project and project details and expectations. enVista's team becomes a trusted partner of your team, taking care to understand all of the unique nuances of your business. This information is leveraged later in the project to make data-informed decisions for how to augment operations.

Analysis and Recommendations

During the analysis and recommendations phase, enVista's team performs data analysis on the data that was collected during the assessment phase to develop informed recommendations for enhancing processes throughout the supply chain.

During this phase, we develop our unique People, Process and Technology Roadmap, which contains near- and long-term recommendations for each subgroup. The client will transition out of this phase with several actionable improvements that can be implemented within the supply chain to create a more efficient, agile and profitable organization.

Prioritization and Roadmap

enVista's team of consultants and implementation experts understands that it can often be difficult to prioritize the various challenges within the supply chain, so we handle that for you. Our end-to-end supply chain assessment includes the final phase, prioritizations and roadmap. We rank and prioritize our recommendations, develop important metrics with which to monitor improvements throughout the supply chain and provide a detailed near- and long-term roadmap for implementing and sustaining these people, process and technology improvements.

About enVista
