

SharePoint Solutions

Ensure your collaborative efforts are easily accessible

As a Microsoft SharePoint partner, we have the expertise to build beautiful solutions with all the features your business needs to achieve success, helping you gain full value for your SharePoint (online or on-premise) platforms.

The key to a successful work environment, especially in the age of remote employees, is the ability and ease with which you can collaborate with others. The most important aspect of collaboration platforms is the user experience. Without an easy to use collaboration portal with the appropriate user interface, associates will not want to use it. enVista's Digital Development Team can help create a successful platform for use across your business.

enVista's Digital Development team builds beautiful SharePoint solutions with all the features your business needs to achieve success, helping you gain full value from your Office 365 platforms.

enVista's SharePoint solutions have all the features your company needs to achieve success. Whether your business needs an intranet, public facing site or both, enVista can provide a solution designed

for your business today that is flexible for future growth. SharePoint is an enterprise information portal that can be intranet, extranet, and internet sites. It is a content and project management system from Microsoft that lets you manage collaboration and documentation.

Our team can customize your workflows for higher employee engagement and productivity. With SharePoint, users can create content, manage teams, approve concepts, share files, and much more. We provide many resources to help you jump start your SharePoint site. Our experts can present to your team new features and services and answer any of your questions.

Our Collaboration team has expertise in:

Discovery and Planning

Whether you are just starting to build, have something partly done or are migrating, our team will guide you through the process with insights and recommendations, creating a customized game plan that is right for your business. By following our O365 Synergy process, our experienced team in usability, design, and programming will partner with your team to explore the possible solutions for your business issues. We evaluate your current business processes and current environment to decide which approach will maximize productivity. We meet with your experts to get to the root of your problems and to discuss which solution is best for your business.

Design

Whether your business needs an intranet, public facing site or both, enVista can provide a solution designed for your business today that is flexible for future growth. Preserving a consistent brand is critical to employee adoption or maintaining customers. People use many devices in their busy schedules and having a solution that adapts to mobility is a must. Backed with a team of experts in usability, design, and programming, enVista will design a responsive SharePoint solution that fits all of your business needs. We strive to provide avenues to make your employees excel in their responsibilities.

Development

The more business processes that you can automate and make efficient, the more ROI you will get with SharePoint. Our team works with you to best utilize the platform and bring in your current business processes. To ensure a strong future-proof approach, we focus on OOB and client-side development for your platform regardless if it is on-prem or in the cloud. This includes standard branding with client-side development, SharePoint Framework Add-In development for more robust customizations and PowerApps development.

Business Process Management

Automating business processes and keeping those processes up-to-date, matching changes in the business is critical to usability and value. Our enVista consultants can help you manage your forms and workflows throughout Office 365 and Azure, utilizing the robust feature set provided to you OOB.

Integration

Integration is the key to unlocking the full potential of automated workflows. Beyond building process automation that works with SharePoint and Office 365, we can help you automate complete processes across multiple systems. Microsoft Flow natively supports integrations with many popular software platforms. These platforms include names such as Dynamics 365 (AX/CRM), Salesforce, Act!, DocuSign, GitHub, and WordPress. Microsoft Flow also supports integration with database systems, such as SQL, Oracle, and DB2.

Content Management

Keeping your content fresh is critical to keeping an up-to-date site that your employees enjoy visiting. Our team can help you manage your content through SharePoint's unique features that allow you to edit, publish, and organize content.

Microsoft Planner and Teams

Many business processes happen between a collaborative team. To promote communication and quickly move business processes forward, we can help you build out your central hub for tracking projects and teams and tasks in Microsoft Planner. We can also help you get the most value out of the real-time, chat-based workspace, Microsoft Teams. A team can have one place to communicate and track everything.

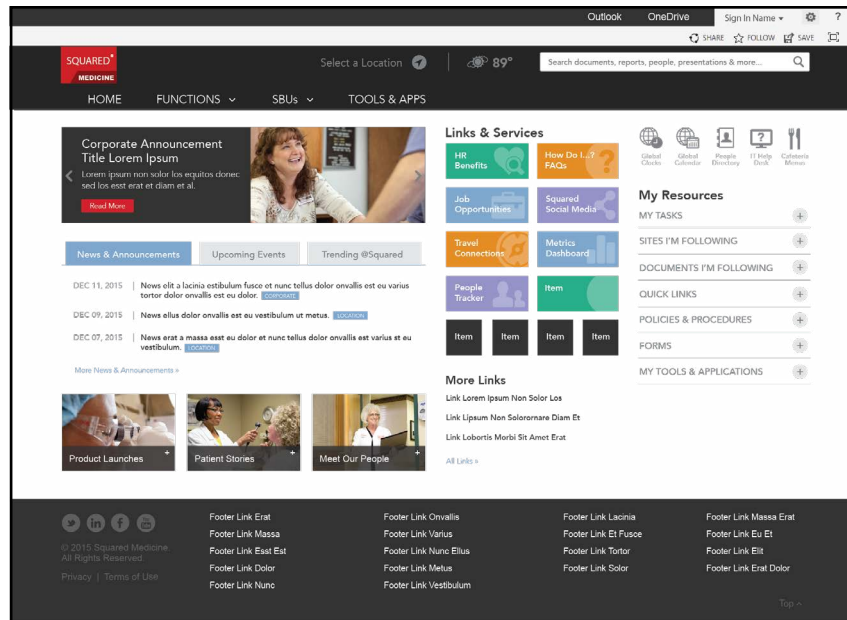

Education/Training

Just like any other platform or new software solution, users must know how to use it and understand the benefits they will receive.

Once they understand the benefits and capabilities, they will continue to ask for more investment into the tool and use it more and more in the overall business process. We can assist you by designing a comprehensive training program built around your users' specific needs, which can be delivered on-site or online. We have found that how-to training and walk-through videos generically present materials

that cover common scenarios most users encounter using the platform. To increase results, we can also develop a customized training solution that examines your company's real-life scenarios. Your IT staff and end users can get answers to their specific situations and learn how to better leverage the platform within their unique environments.
