Transportation Management System (TMS) Services

With the right TMS, transportation leaders can combat two of every business' current, most prevalent challenges: cost control and labor constraints. enVista takes the guesswork out of selecting and deploying the right TMS for your business operations, providing a trusted partner for software selections, implementations and support. We identify your organization's operational and technical needs and business requirements to source and implement the right TMS for your business - the first time.

Experienced and Data-Driven Approach

enVista's team will evaluate your operations and utilize our software and operational experience to procure a shortlist of vendors. Focusing on the business case, enVista will outline and guide you through a quantitative and qualitative selection process to ensure you select the right provider that will deliver the solution you need. enVista's unmatched operational experience enables us to illustrate your organization's future state, eliminating the unknown from your selection process.

Proven Methodology

enVista's proven enABLE methodology for TMS selection and implementation includes a comprehensive evaluation of your business requirements, vendor evaluation, shortlisting, TMS demonstrations and final recommendations. Once you have selected a TMS solution, enVista will help you with the negotiations and the implementation process, including project planning, configuration, testing, user training and go-live support.

Robust Resources

With a robust resource base, enVista's team of experts includes project managers, business analysts, technical architects and implementation consultants. We also have a range of partnerships with TMS vendors, including MercuryGate, Manhattan, Shipwell and more – ensuring that you receive the most comprehensive and innovative solutions.

Tailored Approach

enVista's team does not believe in a one-size-fits-all approach for TMS selection. We spend significant time understanding your organization not only to select the right tool, but also to be able to adapt and configure that tool to meet your business' unique needs.

TMS Selection Steps

1. Requirements Gathering: enVista starts by conducting a comprehensive review of business operations to identify your unique TMS requirements. Don't worry, we have established lists of basic requirements to quicken the process for TMS, vehicle routing and scheduling, global transportation management, parcel execution and more.

2. Vendor Evaluation: Based on requirements, enVista will identify a list of potential TMS vendors and evaluate them based on various criteria, including functionality, scalability, technology platform, support and cost.

3. Shortlisting: After evaluating the vendors, enVista will collaborate with you to develop a shortlist of TMS solutions that meet your requirements and provide a detailed demonstration of each vendor.

4. Demonstration Support: Rather than sell you on unnecessary features, these demonstrations aim to ensure you understand how each vendor's solution would execute your business case.

5. Final Recommendation: Based on the results of the evaluation and demonstrations, enVista will provide a final recommendation for the best TMS solution for your business, benchmark the providers' costs and provide negotiation support.

TMS Implementation Steps

1. Project Planning: enVista creates a detailed project plan that outlines the implementation process, timelines and resources required. Having a comprehensive project plan ensures you are in the driver's seat for a successful implementation.

2. Solution Design: enVista's solution architect team gathers unique business requirements and translates them into specific functional and technical design documents in alignment with leading industry best practices. Capturing both operational and technical requirements for your organization's present- and future-state roadmaps is vital to building the TMS foundation for your business success.

3. Configuration: enVista's team will configure the TMS solution based on your specific operational and technical requirements, enabling faster system deployment and user adoption and recognizing immediate TMS efficiency gains for your organization.

4. Testing: enVista conducts comprehensive testing to ensure that the TMS solution is functioning as expected prior to customer deployment and training. From testing, enVista also develops custom user training documentation to assist with training and change management.

5. User Training: One of the most challenging aspects of a TMS implementation is user adoption and organizational change management for the operational teams. enVista specializes in providing comprehensive user training and documentation to ensure success when leveraging the TMS solution for your operational processes.

6. Go-Live Support: enVista stays the course, offering go-live support to ensure the TMS solution is successfully implemented, adopted and fully operational before we consider the go live a success. Continual check-ins and user support can mean all the difference when it comes to the perception of true TMS value.

enVista's TMS selection and implementation services provide a comprehensive approach to selecting and implementing the right TMS solution for your business – the first time. With extensive experience and proven results, enVista provides improved time-to-value, cost savings of up to 10 percent and increased efficiency.
