Transportation Finance

With myShipINFO®, enVista delivers enhanced visibility to your transportation expenses.

Transportation Finance

Financial managers require accurate spend data on a consistent basis to make informed decisions. The enVista team utilizes myShipINFO® platform to deliver enhanced visibility to transportation expenses.

enVista's myShipINFO® product integrates all transportation systems of record, automates general ledger coding and month-end accrual reporting, supports global bill payment through a partnership with JPMorgan Chase, and streamlines all carrier inquiries related to accounts payable.

enVista's myShipINFO® benefits and features include:

Bill Payment
enVista's partnership with JPMorgan Chase enables streamlined global bill payment in 168 currencies to carriers across all modes of transportation.

Enterprise Resource Planning (ERP) Integration
enVista can integrate directly to most ERP software to automate journal entries.

Systems Integration
In addition to ERP integration, enVista can integrate carrier billing data to order data or executed shipment data from a warehouse management system (WMS), order management system (OMS) or transportation management system (TMS) to maximize visibility and automate financial reporting.

General Ledger (GL) Coding
Automate GL cost allocation for each carrier invoice at the tracking number, shipment level or charge-level.

Accrual/Month-End Reporting
Enable comprehensive visibility to both realized and planned transportation costs in a fiscal period; paid shipments, invoiced but not paid shipments, and shipped but not yet billed shipments.

Split Cost Allocation
Allocate carrier invoices across multiple inputs, such as purchase orders (POs) and ocean containers.

Proprietary technology
enVista's secret weapon is our proprietary SQL-based platform that automates transportation finance rules once carrier invoice data is submitted.

KPI Reporting
Beyond general ledger coding, enVista can allocate costs to custom key performance indicator KPI levels such as fulfillment channel, brand, division, node, location type and category.

Total Visibility
Robust reporting and business intelligence provides all stakeholders with visibility based on their user roles, from transportation finance and operations on the shipper teams to carrier accounts payable (AP) associates.

Automated Remittance
Automate remittance detail directly to carriers for a hands-off remittance detail process.
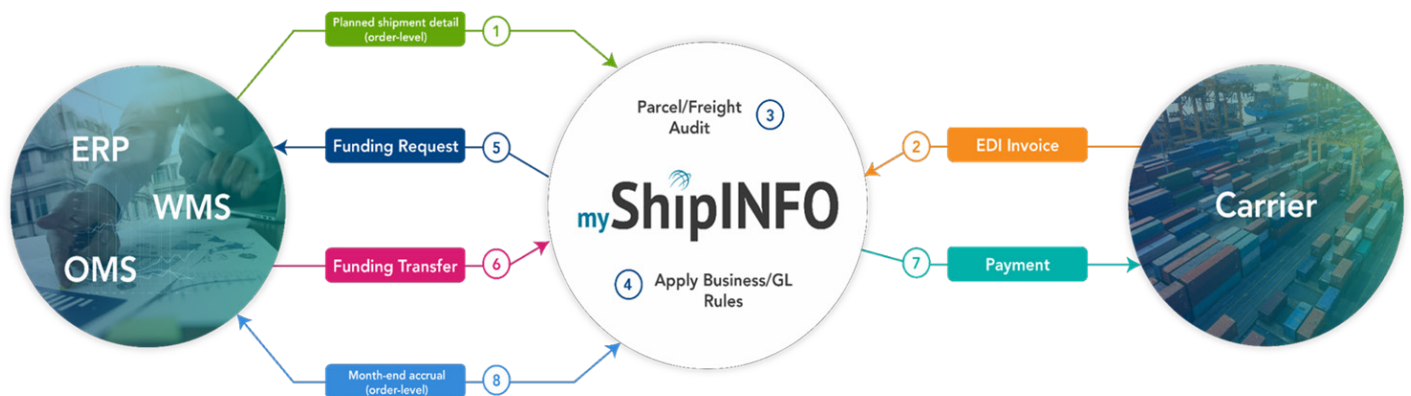

Carrier Services
enVista works directly with carriers across all modes of transportation to eliminate billing questions from a shipper's transportation operations and finance team's SOC 1. SOC 1 reporting provides assurance that enVista has established effectively designed controls.
