

Hardware and Software Procurement

enVista has partnered with major manufacturers of technology hardware and software equipment to provide the best of breed equipment clients need – from servers to RF terminals to storage area networks. We provide maximum value to clients by spending significant time and effort researching and selecting hardware and software equipment.

We consult with clients to determine the equipment that best meets their needs and often bring the equipment partner to the table to help design the right solution for our client. Our team members are certified and highly trained to implement and train users on the equipment.

Warehouse Technology Equipment

enVista's technology practice teams with the company's supply chain experts to recommend and implement warehouse technology equipment. Our supply chain team has decades of experience in supply chain and has implemented hundreds of supply chain solutions for businesses; the enVista team understands what hardware equipment is available for the warehouse and which equipment best meets the client's needs, including pick-to-light systems, handheld devices and voice picking headsets. Our associates have both the technical knowledge and intrinsic knowledge from the field to recommend the best equipment.
