enVista enStore Managed Service

A Turnkey Retail IT Infrastructure for All Your Store Technology Needs.

Retail is Complex

Installing and supporting all of the technology needed to operate a store is tedious and burdensome. Managing your day-to-day IT operations is already a full-time job and adding new store technology roll-outs or updates to existing store technology to your plate increases the complexity and potential of dropping the ball. With many brands adding pop-up stores to the mix, additional complexities arise with speed and agility being key imperatives for success. Outfitting and upgrading physical stores requires coordination of many components:

- Manage multiple vendors and contracts
- Order technology
- Install equipment and software
- Integrate systems
- Test new technology
- Train employees
- And much more…

After all your store technology is properly installed, questions and issues always arise. The new and different devices, networks, and software add complexity for store personnel as well. Answering store associate and manager questions, while necessary, compound your workload as does the 10-20 different phone numbers to call depending on the issue.

You don't have the bandwidth or dedicated resources to do everything – nor do you have the time to research all the latest technologies. Your time is best spent focusing on what you do best – customer service and driving revenue growth.

enVista Makes Retail Less Complex

We can manage your entire store technology infrastructure. enVista enStore is the perfect solution to manage everything from ordering, installing, integrating, testing, and training to ongoing support of your store IT.

No matter where you are in your technology journey, we can help. Whether you are opening new stores with complete technology needs or have established stores with ongoing technology update needs, enVista is an extension of your team. We help you efficiently deploy and maintain your store IT systems.

enVista can take care of everything for you or you can select just the pieces you would like help with. We can customize a complete turnkey solution to meet your specific needs.

We handle all your technology needs throughout the journey, whether it is on-site installation, remote support or both.
