DMW&H Systems

"We've just introduced mixed-case palletizing with our enhanced gripper that can wrap three or four boxes at a time," says Paul Laman. "It travels in a chassis rather than a gripper arm, which brings the costs down and doubles the performance. Also in Booth 4235, we will be showcasing our Shiraz Warehouse Control System, a very intelligent, sophisticated WCS that takes into account our 20 years of knowledge in the wine and spirits industry when it comes to planning all the picking and running the controls." www.dmwandh.com

enVista

"At Modex, enVista's presentation on WMS (Warehouse Management Systems) vs. WCS (Warehouse Control Systems) vs. WES (Warehouse Execution Systems) will discuss the next generation in WES that are closing the gap between WMS and WCS in automated facilities," says Jim Barnes. "Which one you select depends on your facility. There is a place for WES in the right vertical industry and in the right facility layout and design. I'll also present How to Apply Lean Principles to a DC, which deals with removing waste by touching the product the least amount of times. Contrary to belief, sometimes that means taking automation away." www.envistacorp.com

JBT Corporation

"You can visit Modex Booth 4647 to see JBT's newest counterbalance Series AGV," says Mark Stevenson. "This is just the latest development in highly-flexible, end-of-line automation solutions for warehousing, distribution centers, and automatic trailer loading-unloading. JBT AGV Systems improve safety, productivity and substantially lower costs across the enterprise-wide supply chain. We're a leading global supplier of automatic guided vehicle (AGV) systems, which are an alternative to forklifts and provide safe movement of finished goods, raw materials and work-in-process in warehousing and manufacturing sites." www.jbtc-agv.com

KION North America

"We will be showcasing three new products in Booth 3935 that were specifically designed for the North American market," says Ashley McGee. "New Linde products will be launched at Modex, including the 1169 Electric Walkie Stacker (EWS) and our 80 volt electric forklift, Linde Series 1276, which offers a variety of extended attachment use including single-double pallet handling. We'll also be showing our Baoli D+ Series KGB25 Class V forklift. Baoli is competitively priced so those accustomed to renting forklifts can now justify the purchase of one." www.kion-na.com
